

Hi!

I'm Mrs. Reilly, your child's Math teacher this year. I am beginning my 22nd year of teaching and my 19th year at HK. I began my career teaching at Torrington HS for three years before coming to HK. I completed my Master's Degree in Mathematics in 2003 (that makes me sound old) and spent time during summers working at the state level scoring BEST portfolios of beginning teachers.

While it may be "dorky" to say, I think Math is fun!

I have taught all levels of Math, (except Calculus). I have taught all levels of Geometry since my first year of teaching and have flowed with its evolution into Common Core (which I am a fan of). I am always working on adjusting and updating the curriculum to make sense for students.

I began teaching Statistics about 6 years ago (?) and consider myself lucky to do so. I took an intensive AP Stat training course in the summer of 2012. I really like Statistics- the "grey" math. It is so incredibly life applicable and allows students to learn how to understand what they hear and read and question everything they hear and read with respect to "statistics say...". Last year was my first year teaching AP Statistics and had a wonderful experience. I am hoping to take all I learned last year and keep building it.

On a personal note, I'm married and have two awesome kids - Middle School and High School age so I know the life of these teen and preteen years.

In my free time (mostly summers) I have taken to reading (for pleasure) and have attained a new summer reading record of 16 books this past summer.

Looking forward to the journey of the coming school year!
